	Application ready to proceed with exception(s), as noted	
	Application rejected.	
	Application not ready for review, revised and resubmit as noted	
Action Number:	Summary of CPUC Staff Required Action by the PA:	Action Category

Note or Instruction Number:	CPUC Staff Notes or Instructions:	Instruction Category
1	Only savings from PPP eligible gas meters should be claimed. We recommend demonstrating that natural gas savings are from PPP eligible meters only. The cogeneration natural gas meter does not pay PPP per it's rate schedule.	Calculation Methodology
2	Only savings from PPP eligible electric meters can be claimed. We recommend demonstrating that electricity savings are from PPP eligible meters only.	Calculation Methodology
3	We recommend calculating fractional savings uncertainty for the models. While there isn't an FSU requirement in the M&V guidelines, we recommend calculating and reporting FSU as part of best practices. Please use actual savings from the model to calculate the FSU.	Model Goodness of Fit
4	Though no savings are claimed for this site, we recommend claiming the electric savings from the electric model. Either through the model or bottom up calculations. The opportunity register indicates that opportunities/projects were completed, which would support an electric savings claim.	Electric Savings
5	Each NRAs should not have a different number of "days in reporting period prior to installation" between electric and natural gas. We recommend adding a description of why different days were used between electric and natural gas non-routine adjustments.	NRE Adjustments
