RE: Data Request to Support Savings Claim for PGE MBCx001.2 (EEGA 2103)

This request is focused on one particular application undergoing ex ante review:

- PGE MBCx001.2 as part of the MBCx Program

Refer to ex ante review report (PGE MBCx001.2 EAR Draft.doc) for the full requirements and context of this request. Additional documentation is needed to complete this review, including the following:

1. Provide live and fully functional energy savings calculations along with the site inspection report, photographs, and mechanical schedules to verify the input used for the equipment and system.
2. Provide the remaining useful life (RUL) of the existing equipment and effective useful life (EUL) estimates for the new equipment
3. Provide disaggregated project cost estimates
4. Provide project application documents
5. As-built sequence of operation

Itron requests this information by August 8, 2012. Your full and prompt response to this data request is appreciated, as Itron is attempting to provide timely feedback to PG&E on the savings claim for this application. The requested information should be provided electronically.

If you have any questions or need additional information, please do not hesitate to ask.

Please send requested information by posting on EEGA or other secure website.
